

SEP: 006 Deposit and Withdrawal API

SEP 6 Deposit and Withdrawal, I understand with the help of this protocol that this helps anchor people's bank accounts assets off chain are transferred over. With the help of other SEPs in conjunction with this, also the unbanked (eventually).

My interpretation and linking to an ICO

When scrolling through the Spiritual and Divine ICO's of Stellar Russia, I came to the following ICO, which I think best would be translated to:

CUSD Celestial Universe Stellar Dollar "a groundbreaking concept designed to redefine transactions not only within our solar system but across galaxies and spiritual realms." working in conjunction with Stellar Exchange.

Benefits

1. Universal Acceptance: recognized and accepted across space, galaxies, and spiritual realms, eliminating the need for multiple currencies
2. Efficiency and Security: ensures fast, secure, and transparent transactions, safeguarding users' assets in any environment
3. Interconnectedness: promotes cooperation, exploration, and cultural exchange on a cosmic scale
4. Integration with Other Currencies: seamlessly bridge to other currencies used in different realms, ensuring flexibility and accessibility for users

Powered by the Stellar blockchain and imbued with universal significance, CUSD offers users unparalleled opportunities for economic, cultural, and spiritual enrichment in the vast expanse of space and beyond. As we journey forth into the cosmos, let CUSD be the guiding light that illuminates our path towards a more interconnected and harmonious future

So, reading the above, I interpret it as the anchoring of Stellar of the whole Earth through SEP 6, rich or poor, the extension of this liberation that must start here, going through the Stellar Exchange, an exchange not only financial but of cooperation, spiritual and universal acceptance across the Cosmos. Deposit and Withdrawal although, very direct and practical terms could be translated to mentioned diplomacy, an exchange of culture, karma, emotions like love, gratitude for blessings, friendship, empathy and also true teaching and education. We also learn to love and respect others different to ourselves. This is imperative in the design of things, how else can we help those worlds as bad if not worse than the Earth?

I also see that through this way we and other civilizations will transcend the commercial and economic material exchange and will only exchange positive emotions and positive energy in the future. I see where all the ICO's are leading to this, If I understood correctly, maybe Taoism alluded to this, transcend something by repeating it constantly, that it is no longer necessary. In this case financial gain, but not at the expense of others, as the cabal has created, even in other realms. Any security issues and blacklisting would happen like here, Celestial KYCAML and acceptance or rejection.

I see our beloved Ben as overseeing this vast project but it could also be delegated to Ivan and others.

In brief it would complete the phrase as above so below or on Earth as it is in Heaven.

- **Defines a standardized API for anchor services to implement deposit and withdrawal functionalities, facilitating seamless interactions between wallets and anchors for fiat and other asset transfers. Covers aspects like account management, fee structures, transaction statuses, and more.**
- **This SEP defines the standard way for anchors and wallets to interact on behalf of users.**
- **Offchain assets swapped into Stellar assets regardless of wrapping or value**
- **Consolidation- some assets that come to stellar will get changed into other assets**
- **Can withdraw into bank account**
- **Creates Anchors that create accounts for other people. Some anchors only exchange once = everything goes onto Stellar.**
- **KYCAIML- if you don't pass, wallet gets blacklisted**
