

SEP 11: TXRep: Human Readable (created 31/8/2018)

- Defines "txrep," a human-readable, low-level representation of Stellar transactions, enabling unambiguous specification of transaction details. Provides a standardized format for documenting, verifying, and understanding Stellar transactions in contracts and other contexts
- Txrep is a human-readable representation of Stellar transactions that functions like an assembly language for XDR.
- Programming code into human readable language.
- Facilitates mass adoption, part of Red Hat and is being used for every organization in the whole world.
- SEP 11 makes Stellar truly Open Source DEX because anyone can use it.
