

SEP 12: KYC API (created 11/9/2018)

- Defines a standardized API for handling KYC information exchange between wallets and anchors. Outlines endpoints and data formats for customer creation, information retrieval, status updates, and file management, facilitating secure and streamlined KYC processes.
- This SEP defines a standard way for stellar clients to upload KYC (or other) information to anchors and other services.
- Plaid Company- will link your KYC to different accounts.
- Red Hat Authentication lowers the barrier of entry for on-boarding the public en masse.
