

SEP 35: Operation IDs (created 26/8/2020)

- Assignment method for IDs for operations in historical ledger data, converting a de facto ecosystem standard into an explicit one.
- OpIDs definition will be upgraded (Prettier), flexible yet defined strategy to cover all areas of uncertainty.
- Generic and pseudorandom approach to prevent hacking, includes failed TX for generative ML
- Maximum supported number of ledgers is 2,147,483,647
- Emily: most likely facilitates mass adoption by setting industry standard (think ISO20022) for intergalactic compliance.
